Sofia Lorenzo

Executive Overview

PrimeWorld Land Holdings is a real estate developer headquartered in Quezon City, Philippines, specializing in residential subdivisions, condominiums, and hotel development. Though founded in 2010, the company only began significant growth in employee base and project scale in 2018 following a change in CEO, and today employs 120 people. The scope of this audit covers the full organization, given its small size and that it only has a single HR professional managing talent across all functions. Through detailed interviews with the CEO, HR Manager, Business Development Lead, and Engineering Head, a survey of 42 employees, and a review of talent-related artifacts, we assessed its talent system comprehensively.

The results reveal a company whose effectiveness rests almost entirely on one person. PrimeWorld has genuine strengths: high organizational pride (4.83/5), strong business performance, and a fair leadership culture. However, the same relational culture that makes it a good place to work has reduced the urgency to formalize HR processes, leaving talent decisions concentrated in the CEO and the organization structurally unprepared for growth or leadership transition. Having only begun scaling in 2018 and having hired its current heads directly into their roles, the company has never managed a head-level departure and is unprepared for when it happens. Across the 9 MBN levers, average maturity is 2.1/5, below the threshold of ‘good and mostly consistent’, with two levers at Critical Gap: Build Your Pipeline (0) and Know Your Critical Roles (1). The 18-month blueprint that follows is designed to build the processes and leadership accountability that reduce PrimeWorld’s dependency on the CEO as the sole driver of talent decisions, distributing ownership across the organization as it continues to scale.

Current-state MBN Assessment

Lever	Score (0-5)	Evidence
Hire well	3	Structured hiring process (JD→HR→Dept Head). No quality-of-hiretracking or standardized interview rubric.
Drive Performance	3	Annual Performance Review is conducted based on behaviors and KPIs. Annual bonus and merit increase are calculated based on this review. A policy exists for underperformance management. Business has been growing every year, with most targets and KPIs on track or exceeded. However, a couple of managers do not share feedback directly with employees despite being expected to, meaning detailed performance review documentation reaches HR and the CEO, but does not always reach the employees they concern.
Retain the best	2	“Employee of the Year” cash prize, strong relational culture, and fair leadership perception. No retention risk tracking.
Realize potential	1	Performance Evaluation Template and Annual Performance Review exists but only cover performance and not potential. No formal Potential Identification Program or criteria; promotions are infrequent.
Develop deliberately	4	An Individual Development Plan exists and links to performance evaluations, Coaching based on values and skills, monthly hands-on training, cross-functional exposure, and mentorship in key areas (Sales and Engineering).
Motivate meaningfully	3	Positive culture with mentorship, recognition, learning sessions, project rotation (engineering), volunteer initiatives, and activities out-of office with the leader (sports). No company survey to measure formal engagement. Critical roles and high potentials are not measured separately, and there is no specific motivation plan for them.
Know your critical roles	1	Informal alignment between the CEO and HR Manager on the most critical roles. No documented or formal succession planning.
Build your pipeline	0	Informal identification of talent for promotion. No formal succession pool or succession planning process exists.
Play the chessboard	3	Some evidence of strategic talent deployment in the Engineering Team (3-month talent rotation program) and in cross-functional squads assembled ad-hoc for business-critical projects. No evidence of talent hoarding and poaching found.

Key Insights

- Across the levers most dependent on formal process (Know Critical Roles: 1, Realize Potential: 1, Build Pipeline: 0), PrimeWorld consistently relies on the CEO's personal judgment rather than structured systems, leaving the organization unprepared for growth or leadership transition.
- Where scores are stronger (Motivate Meaningfully: 3, Retain the Best: 2), performance is sustained by culture and strong business results rather than formal retention or engagement systems, masking the underlying structural gaps.
- Build Your Pipeline scores 0, the only lever with no practice whatsoever, and represents the most critical and immediate risk to PrimeWorld's talent sustainability.

System Coherence & Critical Issues

A. Vertical Alignment (Strategy VS Talent)

Strategy: Leaders can articulate critical roles and near-term priorities. However, there is no formal documentation or critical role mapping tied to the project pipeline, meaning strategic talent needs are identified informally but never translated into system-level action.

Culture: The culture reads as genuinely people-driven and transformational. However, it operates through the CEO's personal relationships rather than repeatable processes, meaning cultural strengths are real but non-transferable.

Structure: PrimeWorld's project-based business requires fast talent deployment and a steady pipeline of capable leaders. The lack of cross-functional mobility in most roles and the absence of succession coverage create a static structure that cannot yet support the company's growth ambitions.

B. Horizontal Coherence

Lever 1	Lever 2	Coherence/Contradiction
Know Critical Roles	Build Pipeline	For building a pipeline, it is mandatory to identify the critical roles first.
Drive Performance	Retain the Best	Top performers have no formal visibility into how their performance translates into growth opportunities, and retention risk is not tracked.
Retain the Best	Motivate Meaningfully	Retention currently depends on culture and the CEO's personal relationships rather than formal motivation or retention systems, making it fragile and non-transferable.

C. Critical Issues

Issue	Why they Matter
CEO as the talent system	Most talent decisions, from identifying potential to managing retention, flow through the CEO personally. This creates a single point of failure that will become increasingly unsustainable as the company grows.
No formal succession planning for critical roles	The engineering and sales heads (seen by CEO as most critical roles) have no documented successors, creating significant operational risk if they leave.
Limited HR capacity constrains strategic talent management	A single HR professional focused primarily on administration leaves no capacity to design or implement the strategic talent practices the company now needs.
Absence of a formal high-potential identification framework	Without a HiPo framework, development investment is distributed based on manager judgment rather than strategic criteria, meaning the right people may not be receiving the right opportunities.
Inconsistent Performance Feedback	Although an annual performance review process exists and managers are expected to share results directly with employees, we found that not all managers do so in practice. Feedback is submitted to HR but does not always reach the employee, leaving people without visibility into where they stand.

Design Principles & Future-state Overview

PrimeWorld will transition from an informal, CEO-centered talent model to a structured system where leadership pipelines, performance feedback, and talent mobility are managed consistently across organisations.

DP1: Distribute talent ownership beyond the CEO.	DP4: Strengthen internal mobility.
DP2: Formalize what already works. Document, standardize, and scale performance management, mentoring, and project rotation.	DP5: Ensure performance feedback reaches employees consistently. Feedback cannot be optional or manager-dependent.
DP3: Differentiate development and retention for critical talent.	DP6: Measure Talent processes with consistent HR metrics.

Roadmap

The roadmap below is organized around addressing the four most critical issues identified in this audit, which, by nature, touch on multiple MBN levers simultaneously. A precondition for this roadmap is addressing HR capacity itself. With a single HR professional currently focused mainly on administration, strategic implementation will be severely constrained. We recommend hiring one additional HR professional with a more strategic focus, or, at a minimum, bringing in an HR intern to help distribute the workload, before or during Phase 1.

Phase	MBN Levers	Actions	Milestones	Risk
Phase 1: Foundations (1-6 months)	Know Critical Roles, Realize Potential, Drive Performance	- Document critical roles and begin succession plans. - Define HiPo identification criteria - Introduce mandatory performance feedback conversations.	Critical roles and HiPo criteria defined	Manager's resistance to structured feedback; CEO remains the primary driver
Phase 2: System Development (7-12 months)	Build Pipeline, Develop Deliberately, Drive Performance	- Conduct first succession review with a broader leadership team. - Launch targeted HiPo development program (mentoring, training, role rotations). - Train managers on feedback and development conversations.	Succession plans and HiPo development program launched	Limited HR capacity slows implementation
Phase 3: System Integration (13-18 months)	Retain the Best, Motivate Meaningfully, Play the Chessboard	- Promote internally from the succession pool and/or HiPo group. - Introduce retention monitoring for critical talent. - Launch basic HR metrics dashboard. - Expand cross-functional mobility.	HR dashboard operational and retention metrics tracked	Data availability and HR capacity constraints

Success Metrics

Critical roles with documented successors, HiPo criteria defined, retention rate of critical talent, internal promotion rate, HR dashboard operational, and sustained business performance against annual targets as talent practices mature.

Appendix

Exhibit 1: Public information (Indeed Review)

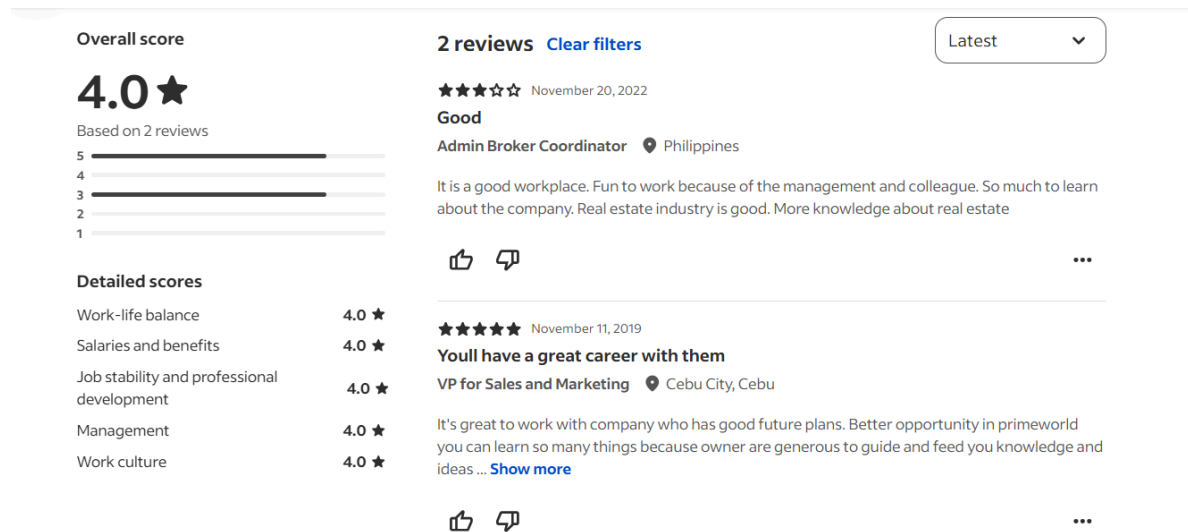

Exhibit 2: Public Information (LinkedIn)

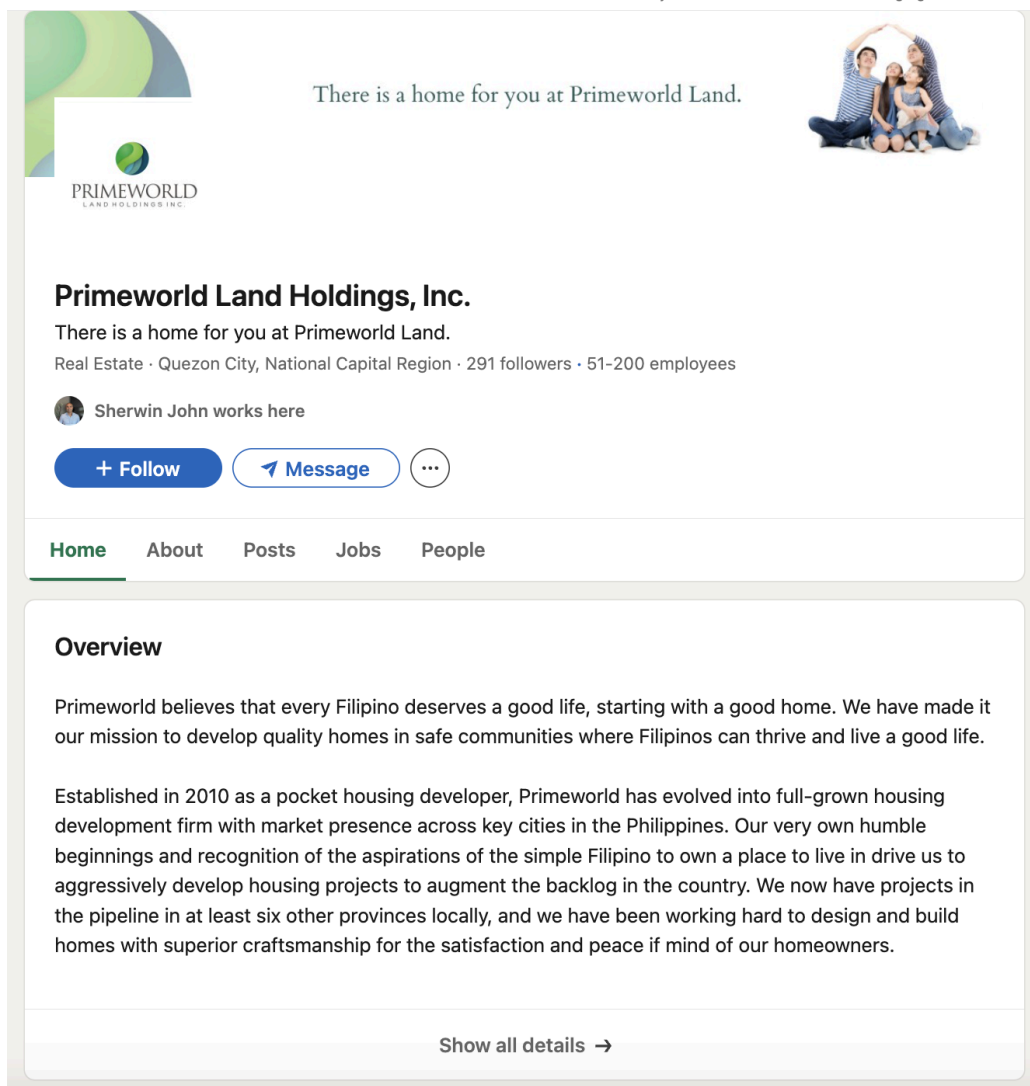

Exhibit 3: Interview Key Insights

Sherwin Uy — Chief Executive Officer

Question	Key Insights
What are the greatest challenges facing the organization?	- Two primary challenges: permitting/regulatory delays in the Philippines creating staff underutilization, and construction delays from outsourced contractors affecting turnover and collections. - Both are largely external and outside direct organizational control, yet carry significant workforce planning implications.
What are the key business priorities over the next 12–18 months?	- Turn over three subdivisions, launch one condominium project, begin construction on three additional subdivisions, and break ground on two hospitality projects. - The pipeline demands simultaneous capability across sales, engineering, and marketing functions.
Which roles or skills are most critical to deliver these priorities? (More)	- Three areas identified as critical: Sales & Accounts Management (persistence, document compliance, collections); Marketing (project launch support); and Engineering (contractor oversight and quality control). - In-house engineering is considered strategically essential despite outsourced construction.
Where are the greatest people/talent risks? (More)	- Attrition in Accounts Management is the highest risk—'each account has a story', because relationship knowledge is tacit and difficult to transfer. - Losing the Engineering Head is also flagged as hard to replace. - Risk is concentrated on the operational side rather than senior leadership.
How much time do you spend on people processes weekly? (More)	- Approximately two hours per week, focused on hiring, annual performance reviews, and rare disciplinary incidents. - Limited HR involvement is partly enabled by outsourcing construction labour, which removes a major source of people's issues.
How is HR structured? (More)	- A lean, two-person HR team operating independently across Luzon and Visayas—no hierarchical reporting between them. - HR functions are primarily transactional (payroll, timekeeping, recruitment) rather than strategic.
How does talent move within the organization? (Better)	- Cross-departmental movement is rare due to highly specialized, technical roles. - CEO is open to lateral moves for generalist roles but notes they have almost never occurred in practice.
To what extent are succession plans in place? (Better)	- Succession planning is informal: Sales and Accounts have partial coverage via assistant manager roles; Engineering has no designated successor. - High-potential tracking is done informally by the CEO through direct observation rather than a structured programme.
How is performance assessed and rewarded? (Better)	- Annual performance evaluation every April covering KPIs and behavioural dimensions; results influence merit pay increases. - Commercial teams receive an additional collection-based bonus through a percentage matrix. - CEO reviews all evaluations personally, citing the advantage of direct visibility in a small organization.
What development opportunities exist? (Now)	External technical seminars, monthly internal knowledge-sharing sessions (cross-departmental), and annual team-building events with external leadership speakers.

	• Training seat allocation is limited; department heads decide participation based on tenure and role relevance.
What adjustments did you request to the employee survey? (Now)	• Requested removal of questions on evaluation clarity and career paths, citing risk of bonus-related disputes and the flat organizational structure. • Requested addition of questions on overall job satisfaction and perceived company improvement year-over-year.

Celine Co — *Business Development Lead*

Question	Key Insights
How is the Business Development team structured?	• Approximately 30 employees organized under five team leads, covering revenue generation, sales administration, account management, and property management across Manila projects. • Each team lead is responsible for day-to-day supervision.
How much time do you spend on people management weekly? (More)	• Approximately one full day per week, used to review departmental accomplishments, identify misalignments, and ensure operational alignment. • Urgent people matters are prioritized as they arise, outside of this structured time.
How do you approach hiring decisions? (More)	• Hiring decisions focus on alignment with company values and behaviours alongside role-specific qualifications. • The current team is described as having 'the right people with the right talent,' reflecting confidence in existing composition.
How is performance managed within your team? (Better)	• Performance is reviewed quarterly using structured evaluations that combine KPIs (number-driven targets), behavioural standards, and leadership qualities. • Weekly monitoring of numerical targets enables early identification of performance gaps and timely intervention. • Valued attributes include initiative, positive peer influence, clear communication, and long-term commitment.
How are employees developed and coached? (Better)	• Development is primarily hands-on through expanded responsibilities and cross-functional assignments, viewed as the most effective method for building adaptability and problem-solving skills. • Formal training provides structural support; coaching focuses on values alignment, technical competence, and readiness for larger roles.
How are tough talent decisions (e.g., terminations, promotions) handled? (Now)	• Terminations are framed within a broader evaluation process designed to identify strengths, support development, and enable realignment before exit. • Friction is minimized by clarifying expectations early and providing ongoing support, so performance standards are well understood. • Promotions are guided by critical competencies, performance metrics, and standardized KPIs; internal candidates are offered opportunities first.
How do you differentiate between performance levels? (Better)	• Best performers are distinguished by positive team influence and demonstrated leadership; low performers are typically no longer in the organization following structured termination processes. • Average performers are those who consistently meet established standards.

How is succession planning approached in your area? (Now)	• Succession is guided by common KPIs, performance metrics, and department-specific accountability measures. • High performers are intentionally developed for future roles, supporting both long-term talent preparation and short-term continuity. • Decision-making is described as fair, clear, and data-driven.
Can you describe a cross-functional deployment example? (Now)	• An emergency government requirement to collect five years of customer data was addressed by forming a cross-functional project team drawn from high-performing employees. • Strategic selection based on capability enabled rapid, effective response without additional staffing.
What prevents you from spending more time on people development? (Now)	• No specific constraints reported; people development is prioritized as needed. • The importance of understanding the organization as an ecosystem and communicating business goals effectively was emphasized as the foundation of strong people management.

Leonard Paredes — *HR Manager*

Question	Key Insights
What is HR's role when business priorities are set?	• HR operates as a generalist function handling staffing, selection, payroll, and timekeeping. • One HR professional manages all functions solo across their region; there is no strategic HR planning or workforce forecasting role currently in place.
How does HR handle new role creation and recruitment? (More)	• Recruitment uses Indeed (considered most effective, especially for engineers), the company's Facebook page (supported by the Marketing team), LinkedIn, and referrals. • Department heads draft job descriptions; HR edits and posts them. HR conducts the first interview, then endorses candidates to department heads for final decisions.
What are the greatest strengths and improvement opportunities in current talent processes? (More)	• Strengths include annual guaranteed pay increases, a CEO who is personally visible and knows all staff, and a relatively stable workforce. • Key improvement opportunity: the annual appraisal process lacks upward or 360-degree evaluation for heads and supervisors, a gap HR has flagged to leadership.
What typically prevents internal moves or promotions? (Better)	• Internal promotions are uncommon partly because full operations only began six to seven years ago, limiting the organizational history of movement. • No structural barriers were identified; rather, the flat structure and specialized roles reduce natural promotion pathways.
What happens when a key employee signals intent to leave? (Now)	• Common resignation drivers include compensation, perceived entitlement issues, conflict with a supervisor, or unwillingness to relocate (especially for engineering roles). • HR attempts to retain through conversation; only one counter-offer has been made in three years, and it was unsuccessful. • The general stance is to support the employee's decision if they wish to leave.
How reliable is succession planning for key roles? (Now)	• No head-level resignations have occurred in the three years since I joined, so succession plans have not yet been formally tested. • HR notes that qualified candidates for promotion exist within the organization, but these are not formalized in a documented succession framework. • Engineering and Marketing are identified as key roles requiring stronger succession coverage.

How is performance reviewed in practice, and who gives feedback? (Better)	• HR prints and distributes annual appraisal forms; managers complete them; HR summarizes results for the CEO; managers are then responsible for delivering feedback to employees. • A noted gap: some managers keep results private rather than discussing them with employees, contrary to intended policy. • Heads and supervisors are not currently evaluated through the same system, HR has recommended introducing 360-degree evaluation for leadership levels.
How does the organization respond to high versus low performers? (Better)	• High performers receive larger pay increases and are eligible for the Employee of the Year recognition programme with cash prizes. • Low performers are coached by their manager with HR guidance; serious transgressions (e.g., forgery) result in requested resignation. • Coachable attitude or behavioural issues are addressed through manager-led coaching rather than termination.
How do employees typically develop new skills? (Better)	• Skill development occurs primarily through work experience and task exposure. • Formal development includes yearly team-building with leadership talks, and monthly in-office learning sessions where employees share knowledge on topics such as burnout and workplace interaction. • Leadership talks are specifically directed at supervisors.
Who makes and approves talent decisions (hiring, pay, promotion)? (Now)	• Final approval for all significant talent decisions rests with the CEO. • No formal talent review committee or governance meeting exists; HR submits evaluation summaries directly to the CEO. • Department heads can delay decisions but act quickly under urgency, no systemic delays were reported.
What is the overall organisational climate around people management? (Now)	• HR describes the workforce as generally well-aligned with company values, attributing this to the fair and kind treatment by ownership. • A noted risk is that leadership kindness can be taken advantage of, though the majority of employees are described as genuinely good performers. • No widespread complaints or grievances were reported.

Manuel Borja — *Engineering Head*

Question	Key Insights
How is the Engineering team structured and what do they do daily?	• The Engineering team comprises 22 site supervisors deployed across provincial project locations (e.g., Cebu, Batangas), managed remotely from Manila. • Daily work centres on monitoring outsourced contractors, checking quality compliance, evaluating billings, and ensuring delivery schedules are met. • The team structure reflects a monitoring-heavy model, given that construction itself is outsourced to third-party general contractors.
How do you balance people management versus technical oversight? (More)	• The Engineering Head's role involves a significant technical monitoring component alongside supervisory responsibilities. • A noted strategic gap is the tendency to prioritize monitoring over mentoring, identified as a key development area for building internal successors. • Remote oversight of geographically dispersed site supervisors adds complexity to people management compared to office-based functions.

How do you monitor day-to-day performance of remote site supervisors? (Better)	• Performance monitoring relies on daily reports submitted by site supervisors across provincial locations. • The reporting system enables remote visibility into site activity but places a high administrative burden on the Engineering Head. • Improved reporting tools were flagged as a potential enabler of more effective oversight and more time for coaching.
How are hiring decisions made within the Engineering team? (More)	• Hiring decisions in Engineering prioritize technical qualifications and role-specific competence. • Given the difficulty of replacing the Engineering Head (as noted by the CEO), rigorous hiring criteria at all levels are considered essential for operational continuity. • Referrals and specialized job postings (e.g., Indeed) are the primary sourcing channels.
How is performance managed and communicated within the team? (Better)	• Performance management follows the organization-wide annual evaluation cycle, supplemented by ongoing monitoring of technical outputs and site reports. • Feedback is delivered by the Engineering Head directly; however, as noted across the organization, the consistency of this practice varies. • Performance criteria include both technical compliance measures and behavioural standards such as reliability and initiative.
How are team members developed and their skills upgraded? (Better)	• Development occurs primarily through on-site exposure, document review exercises, and direct teaching by the Engineering Head during site visits. • External technical seminars (e.g., Quantity Surveying) provide structured learning opportunities, though seat availability is limited. • Hands-on experience on diverse project types (subdivisions, condominiums, hospitality) serves as a practical development vehicle.
Have there been any tough talent decisions in the team? (Now)	• Disciplinary and performance decisions in Engineering are complicated by the remote nature of work and the technical specialization required, making underperformance harder to address quickly. • The CEO identified Engineering as a high-risk area for succession, with no clear internal candidate currently designated to replace the Engineering Head. • Tough decisions are typically escalated to or confirmed by the CEO given the strategic criticality of the function.
How does the 3-month project rotation policy work and what is its purpose? (Now)	• A three-month rotation policy exists whereby site personnel are transferred between projects, exposing them to different project types, environments, and challenges. • This rotation is identified as a 'hidden gem' in the organization's talent practices, it provides a foundation for cross-training and capability broadening without a formal programme. • Rotation helps surface individual capabilities and supports continuous learning, and could serve as the basis for a more structured development pathway.
What prevents you from spending more time developing your people? (Better)	• The primary constraint is the volume of technical reporting and monitoring responsibilities, which compete with time available for coaching and mentoring. • Site emergencies and contractor issues create reactive demands that further displace planned development activities. • A structural shift from a 'monitoring' to a 'mentoring' orientation was identified as a key recommendation for the 18-month action plan.

What would help you be a better people manager? (Better)	- Improved reporting tools and systems would free up time currently spent on administrative oversight, enabling more focus on team development. - Additional operational support or a designated deputy would allow for greater investment in coaching site supervisors. - Formalizing succession planning within Engineering was flagged as a priority, particularly given the absence of a designated successor for the Engineering Head role.
---	--

Exhibit 4: Employee Survey Questions (42 answers)

Note: Survey was shortened after the interviews at the request of leadership to remove questions about processes which are not yet adopted in the organization.

PrimeWorld Questionnaire (Likert Scale)

Section 1: Short Answer

- What is your position in PrimeWorld?
- Are you a manager? (Y/N)

Instructions: Based on your experience at PrimeWorld please rate each statement from 1-5

Section 2: Development and Growth

- I have had meaningful opportunities to develop my skills and capabilities since joining the company
- I am aware of the possible career paths available to me within the organisation
- My manager has discussed my career goals with me this year

Section 3: Decision- Making and Pace

- When priorities change, decisions that affect employees are made efficiently
- Process related to hiring, training or approvals help me work move forward smoothly

Section 4: System coherence

- Performance reviews are taken when deciding trainings and promotions

Additional Section Added at Leaders' Request

- Our company has been growing and improving every year
- I'm proud to work in PrimeWorld

Exhibit 5: Employee Survey Results

Are you a manager?	I have had meaningful opportunities to develop my skills and capabilities since joining the company.	I am aware of the possible career paths available to me within the organization.	My manager has discussed my career goals this year.	When priorities change, decisions that affect employees are made efficiently.	Processes related to hiring, training or approvals help me work move forward smoothly.	Performance reviews are taken when deciding training and promotions.	Our company has been growing and improving every year.	I'm proud to work in PrimeWorld.

Exhibit 6: Performance Evaluation Form

	Form No.: -HRD-
	Revision No.: 0
	Effective Date: March 05, 2021

EMPLOYEE PERFORMANCE EVALUATION

NAME : _____ POSITION : _____

DEPARTMENT : _____ DATE HIRED : _____

EMPLOYMENT STATUS: (Pls. check)

☐ Probationary
☐ Regular
☐ Contractual
 ☐ Others
 Specify: _____

PURPOSE OF EVALUATION: (Pls. check)

☐ Transfer Of Assignment
☐ Regularization
☐ Year End Appraisal
☐ 5th Month Appraisal
☐ Change of Employment Status
 ☐ Promotion
☐ Termination
☐ Renewal of Contract
☐ Others
 Specify: _____

Date in Current Position : _____ Date of Regularization: _____

Period Covered From: _____ To: _____

DIRECTIONS:

1. Fill-out cover sheet with the correct data of the employee that is subject for evaluation;
2. Rate the subordinate according to the criteria listed on the Performance Appraisal Sheet. Refer to the Performance Factors for the definition of the criteria and to effectively rate the employee according to the numerical rating; (1 – poor; 2 – below average; 3 – average; 4 – above average; 5 – superior)
3. Fill in the numerical rating of each criteria in the Numerical Rating Sheet;
4. Multiply the numerical rating with the standard weight and fill in the total column for that specific criteria;
5. Add all the total scores to arrive at the total overall rating;
6. Encircle the Overall Rating Equivalent based on the total weighted points: A, B, C, D or E;
7. Write your comments on the individual's weaknesses & strengths. Refer to the Performance Appraisal Sheet and highlight ratings of 1, 2, 3, 4 & 5. Consider all work performed well in the past, favorable trends in skills, trends in performance, areas of special expertise or knowledge demonstrated in the past months and knowledge deficiencies;
8. Write your comments on the Developmental Plan or Area for Improvement. Indicate potential abilities not yet demonstrated at work, or skills that you feel the employee should build and develop;
9. The evaluator signs and fills in the date;
10. Schedule the appraisal interview;
11. The employee appraised signs and fill in the date during appraisal interview.

TIPS ON PERFORMANCE EVALUATION

1. Department Heads should be familiar as possible with subordinates work;
2. Department Heads should look at all aspects of an employee's job performance rather than just 1 or 2;
3. Marginal performers should not be allowed to linger;
4. Department Heads should be objective and honest in evaluating performance;
5. Judgment should be backed up by facts;
6. Personalities and individual work habit shouldn't be allowed to interfere with the management;
7. Make the employee understand the performance standards set

PERFORMANCE FACTORS

1. PRODUCTIVITY – meets the time and volume requirements of job; level of performance in achieving results in his area of responsibility.

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
Below standard; Hardly meet commitments, very low level of performance	Meets targets or established standards; normal job expectancy; fairly acceptable job	Meets targets & standards 86-90% of the time, generally acceptable job performance level	Meets required targets 91-100% of the time, above average job performance level	Meets above & beyond 100% of required targets/standards; exceptionally high performance level

Note: This report should be an honest and objective evaluation of the employee's performance of the job.

	Form No.: -HRD-
	Revision No.: 0
	Effective Date: March 05, 2021
EMPLOYEE PERFORMANCE EVALUATION	

	performance			
--	-------------	--	--	--

2. QUALITY OF WORK – degree of accuracy, thoroughness and excellence of work accomplished.

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
Inaccurate and erroneous work output; more rework	Meets 75-85% of established standards; occasionally erroneous work	Quality of work output is 86-90% of established standards; work is seldom erroneous	Consistently thorough; 91-100% of established standards; above average work output	Meets above & beyond 100% of established standards; maintains exceptional quality of work output

3. QUANTITY OF WORK – volume of work output under normal working conditions; magnitude / extent of work output w/ respect to time.

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
74% or below of established standards; slow	Meets 75-85% of established standards or normal job expectancy; fair amount of work output	Meets 85-90% of established standards or normal job expectancy; maintains average work output	Meets 91-100% of established standards; above average work output	Meets above & beyond 100% of established standards; exceptional work output

4. JOB KNOWLEDGE / FLEXIBILITY / ABILITY TO LEARN – adequacy of knowledge or tasks performed by an individual to accomplish assigned job; understanding of pertinent facts; degree or amount of information possessed w/ respect to the position; adaptability to the job and ability to acquire new and more knowledge

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
Insufficient knowledge of the job; slow-learner & inflexible; needs constant coaching / instructions	Needs improvement; has difficulty adjusting to new job; needs to be constantly reminded	Has sufficient knowledge of the job; normal ability to learn and adjust to new job	Knowledge exceeds job requirements; willing to change w/ new circumstances fast learner	Highly exceeds job requirements; highly flexible outstanding learner; applies new ideas successfully

5. ANALYSIS/ JUDGEMENT/ DECISION-MAKING – ability to examine facts and to determine the relative significance of data to problems at hand; act of deriving a conclusion based on logical reasoning & systematic evaluation of facts & other evidence necessary for people to act

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
makes superficial analysis of data on problems; irrational; notably lacks judgment and sound decisions	occasionally makes adequate analysis of problems; fairly rational; gives fair & sound judgment and decisions	makes good analysis of data; rational; gives good judgment & decision under ordinary circumstances	makes very good logical analysis of data; highly rational; gives sound judgment & decisions under various circumstances	makes very thorough & logical analysis of data; methodical in problem - solving; foresees consequences; gives unusual decisions

6. TIMELINES OF JOB ASSIGNMENT – effective use of time to meet commitments and work deadlines.

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
often late in meeting deadlines; lacks sense of urgency; needs to be constantly reminded of deadlines	occasionally late in meeting deadlines; needs to be occasionally reminded of deadlines	generally meets deadlines; w/ sense of urgency; acts on tasks according to expectations w/ respect to time	meets requirements ahead of time; has superior sense of urgency	outstanding sense of urgency; consistently meets job requirements ahead of time

7. PLANNING AND ORGANIZING – the process of making and carrying out methods for achieving; arrangement of the group and relationship of the work to be performed into a coherent unit to effectively accomplish objectives; ability to anticipate future problems

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
lacks planning; very disorganized; acts on problems as it comes	tends to be disorderly; prepares plans occasionally; acts on problems as it comes most of the time	prepares; plans and organizes work satisfactorily; generally anticipates future problems	organized and effective; work methods are improved and periodically; proactive, acts on problems before they come	highly organized; prepares effective & thorough plans; organizes work in sound manner; highly proactive; anticipates changing conditions

Note: This report should be an honest and objective evaluation of the employee's performance of the job.

Form No.: -HRD-

Revision No.: 0

Effective Date: March 05, 2021

EMPLOYEE PERFORMANCE EVALUATION

CRITICAL FACTORS AFFECTING PERFORMANCE

1. INITIATIVE / DRIVE / CREATIVITY – degree of energy, aptitude and ingenuity in carrying out work assignments

1	2	3	4	5
POOR	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	SUPERIOR
lacks initiative, drive & creativity; needs to be pushed to start; complacent; contented with conventional methods	occasionally generates initiative, drive & creativity; usually waits for instructions before acting on tasks	has sufficient initiative, drive & creativity; self-starter; explores better ways in doing the job	resourceful, self-starter & takes charge; alert on opportunities to improve job; above average energy level	displays outstanding drive & resourcefulness; always alert; w/ exceptional creativity; initiates new methods; always in control
